

WHITEPAPER

# Introduction

## The First Drive-to-Explore & Earn Protocol on the Blockchain!

Drivin' is a revolutionary lifestyle, gamefi and exploration application; designed with the intent to get people to leave their homes and explore the beautiful world that lies just outside our doorstep that has largely been neglected since the advent of the internet and social media. Nothing beats a road trip when setting out to explore the awesome beauty of our physical world and it gets even more interesting when you embark on the adventure using the Drivin' application.

# The Drivin Protocol

Drivin is designed to create a fun filled and exciting experience for all users of the application who want to travel, explore and make friends anywhere in the world. What we have done is to ensure that the roadmap as well as activities to engage in within the app and community are highly impactful. Even though the application will be launched at a future date, the first major event on the roadmap is for potential drivers to mint their vehicles on a specified date. The minted vehicle automatically becomes their open ticket to drive and earn once the app is available for download on both Android and iOS devices. The vehicles are an NFT collection numbering a decent **6969** with over 100 unique traits. Each vehicle has a trait native to it and there are just a handful that are ultra rare so we expect that these rare ones will fall into the hands of some minters. Below are a few features of the drive to earn protocol.

one NFT.

The NFT can be bought in the in-app marketplace or [opensea.com](https://opensea.com) once the initial mint is completed on [www.drivin.club](https://www.drivin.club)

Each NFT determines how many kilometers a driver can cover with their vehicle. It's expected that those who hold multiple cars can travel longer distances and earn the governance token more.

As players continue to drive and earn, they will be mandated to fix their NFT vehicles at a predetermined mileage. The cost for the fixes can be deducted from their earnings.

Drivers are also expected to buy gas in-app. Quantity of gas purchased will be dependent on the engine size of the vehicle they own.

To travel longer distances, players can decide

to boost or change their engines by simply going to the vehicle workshop in the drivin app. A small amount of tokens will be charged for such activities.

Don't want to drive to earn? That's no problem. Players can rent their cars to those who do not own the vehicle NFTs and earn a percentage of the renter's earnings.

While players are getting on-boarded around the globe to drive and earn, the app is designed to track all trips and record distances traveled to create an automatic leaderboard. At the anniversary of the app launch, the player who tops the leaderboard will win a brand new electric vehicle. Other consolation prizes will be awarded to those leading the chart.

## Why Join Drivin?

There's so much to the world that many people have lost touch of, especially since many people virtually switch to being introverts following the global lockdown due to the COVID-19 outbreak. We intend to remedy this! This world is too beautiful to ignore. It needs to be seen first-hand and not just read about. Drivin' will motivate people to embark on road trips so they can see the natural geological formations and natural communities that are waiting to be seen. It would also prove to be a source of fun, a way to handle stress and an opportunity to create memories for life.

Drivin' is a members only club that can easily be joined by owning one of our NFT vehicles. Once admitted, you will be able to drive your real cars and earn as you drive to the office or embark on long road trips if you desire to increase your earnings.

# The Drivin' Perks

Automatic admittance to our member's only club once you hold one of our NFT cars, irrespective of the vehicle class. Members can connect, collaborate and organize road trips together in real life.

Drivin' is a drive-to-earn ecosystem. Members who want to earn simply need to drive their vehicles to accumulate the governance token GET. Imagine getting your gas & other expenses covered with the rewards you accumulate?

In a bid to foster adventurous activities. Drivin' will organize members only road trips in popular destinations across the globe so members can connect and travel in convoys.

First in line for all future token and NFT airdrops. While the governance token will be airdropped to all NFT holders, members will be automatically whitelisted to participate in the utility token private sales.

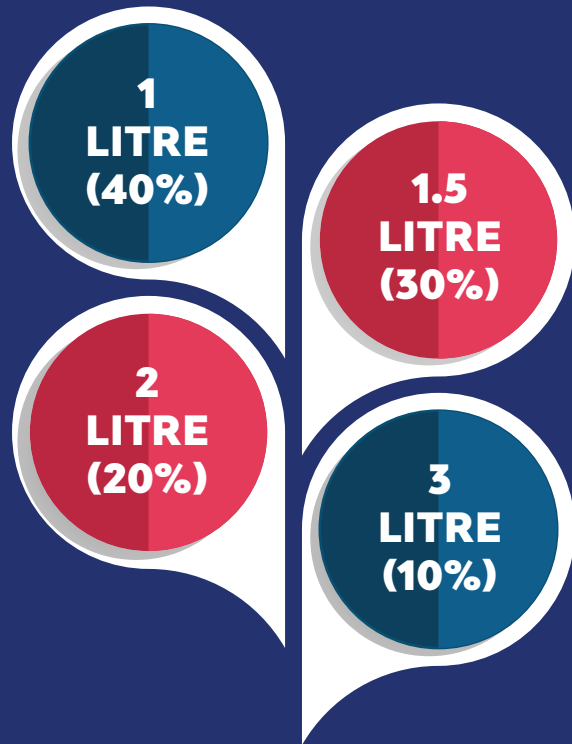

Members can earn passive income from renting out their cars to guests on the Drivin' platform who do not own a car but want to drive-to-earn just like eligible members. The earnings accumulated by the guest is shared 70/30

# Type of Automobiles (By Engine Size)

Game players can own any of the vehicles listed below. The vehicle engine size determines what distance can be covered by the vehicle in a player's possession. If a member wishes to travel more miles, it's expected that the member will need to increase the engine size by getting a bigger one from the open marketplace.

## Drive to Earn Model

As players use with Android & iOS application, they earn the FUEL token every time they drive their cars. The amount of FUEL a player can potentially earn on a daily basis is highly dependent on the player's game stats in relation to the distance covered during each trip. The FUEL token is used for vehicle maintenance, gas purchase, parts replacement, engine upgrade and many more. The governance token DRV can be earned at certain landmark achievements by players.

# Collection

# Roadmap

## Phase 1 - Online Launch

We will begin this epic journey with the launch of our Website, Discord server and Twitter page to house members of the Drivin' Club. Launch will be highly publicized.

## Phase 2- Whitelist for NFT Mint

Potential members who want to own a car in advance for our future drive-to-earn application can get whitelisted to participate in any of the mint rounds.

## Phase 3- Drivin' Application Concept Development

If there is no utility for NFTs, their value is purely based on speculation. Therefore, concept development and operational protocol for the D2E application will be activated at this stage.

## Phase 4- Utility & Governance Token Launch

These are essentially needed to have an effective ecosystem free from inflation. While the utility token will be used for the purchase of the NFT cars, the governance token will be earned as you drive.

## Phase 5- Drivin Android & iOS Application Launch

The application launches at this stage with car holders having capability to transfer their cars to the application so the drive-to-earn era can begin.

## Phase 6- Multiple Listing on Tier 1 Centralized Exchanges

The more Exchanges the token is listed on, the more exposure the project gets and it becomes easier to climb the market capitalization ladder. More users mean more value for the project.

## Phase 7 Big Partnerships With Traditional Tours & Travel Outfits

Drivin' also aims to bring more fun seekers from traditional tours into blockchain powered tours. Who wouldn't want to tour and earn as they travel along with community members?

## Phase 8- Drivin' Global Drive & Win Lottery

As we continue to drive, travel and earn, there will be one clear winner who has done huge mileage traveling using the Drivin' application. On the anniversary of the app launch, this individual or multiple people will win a brand new car along with token incentives for gas.

# Drivin App

The Drivin mobile application is a drive to earn application that combines both gamefi, social-fi and NFT elements to properly motivate people to leave their homes and explore the beauty of short and long distance travels and experience the thrills as well as pleasurable moments that such trips can unearth.

The application will be deployed on both Android and iOS on launch. As club members across the globe continue to travel, they can monitor their earnings, distance traveled, upcoming members only events, special rewards and also connect with other members within their locally using the application. Players can also fix and upgrade their vehicles directly on the application. A secondary NFT marketplace where the vehicles can be bought, rented or resold is easily accessible within the app.

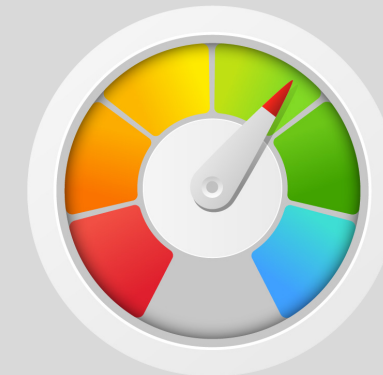

# DRV Tokenomics

Drivin uses a dual-currency mechanism within its self revolving economy. The In-Game Token is **(FUEL)** whereas the Governance Token is **(DRV)**. FUEL is used within the game ecosystem to mint or purchase new vehicles to join the drive to earn culture as well as become a member of the club. The token is also used when fixing your vehicle, changing or upgrading parts and engines, purchasing gas, renting a vehicle etc.

The FUEL supply is unlimited, players get it when they drive and explore the globe. However, the DRV token can only be gotten when drivers achieve a pre-determined milestone which is a combination of distance travelled and number of vehicles acquired. Because the supply is infinite, FUEL will be purchased from the open market and burnt periodically to ensure value is retained for members.

The DRV token supply is capped at **1 billion**. The token protocol is normal.

# Team

## **BRAITHWAITE**

From USA

This guy has been a Degen right from the early days of BTC. He was even renamed as Satoshi Nakamoto at a point in his Degen journey. Loves coding to a fault and migrated to web3 development early in his sojourn through this space.

## **ELENA**

From Greece

We honestly don't know what this lady says all the time. Even when she is speaking English, we literally have to act like we understand what she is saying. But we don't understand shit except she writes it. Jokes apart, Elena was gifted with artistry at birth. This collection and many to come are all illustrated by her. Elena also leads a massive 3D game development hub.

## **NDULOVU**

From South Africa

Frankly, We are excited to have this guy in the team. He is a real degen and NFT/BTC/ETH OG. Along with other members of the team, he has traveled the globe promoting cryptocurrency projects and forming alliances with blockchain ecosystem developers. Mena is also an astute marketer and can sell water to a well.
